DESIGN RESEARCH

- **Visual Identity, Culture, and Communication Research**

Master of Science in Design, Research Project, 07'

Topic

The Design of A Visual Identity System for Communicating Chinese Cultural Tourism to the United States

Deliverables

Research Thesis + Applied Design Project

Research Methods

Primarily **Qualitative**, supported by some **Quantitative** research methods, including literature Review, visual data studies, interviews, and survey

• **ABSTRACT**

In today's highly global scenario, intercultural communication is gaining importance worldwide. Tourism facilitates intercultural communication between foreign travelers and the countries they visit. An effective intercultural communication needs to take into account that the cultural differences between foreign travelers and the host countries. Due to the cultural similarities between the countries falling in the same geographical area, there is a need for tourist countries to promote themselves as distinctive cultures to the potential foreign travelers to maintain their competitive advantage. With China poised to emerge as the number one tourist destination in the coming decade and the United States as one of its most beneficial markets, this project concentrates on communicating the unique Chinese culture to U.S. Americans through the Visual Identity Design for Chinese Tourism, with the goal of improving cultural

understanding and promoting Chinese cultural tourism as a unique brand in this endeavor.

Qualitative research methods were used to gather information that formed the basis of this research project. Methods used are literature review, visual data studies, interviews and a small-scale survey for testing the design solution. The literature review covered theories about visual communication design, intercultural communication, and cognitive learning process, as well as the diverse views of culture, identity, and tourism.

Thus, this project explored how Chinese culture could be represented by a visual identity system, and how it could be shaped as an inclusive integral system that represents a variety of Chinese cultures – local,

regional and national. The project also emphasizes the significance of cultural identity studies in designing a visual identity system that might be used for tourism promotion at any regional level. In other words, it stresses that cultural identity is important for branding a country in promoting its tourism. As a result, this project provides an opportunity to draw more attention to the visual communication aspect of intercultural communication in tourism promotion, especially for cultural tourism. Specifically, this project proposes the approach of incorporating a cultural identity system into a country's tourism brand design. Finally, it concentrates on visualizing and systemizing the cultural identity of the city of Beijing as a starting point for the development of a visual identity system for Chinese tourism.
